"Organization and phylogenetic interrelationships of genes encoding components of the botulinum toxin complex in proteolytic Clostridium components of the botulinum toxin complex in proteolytic Clostridium toxin botulinum types A, B, and F: evidence of chimeric sequences in the gene encoding the nontoxic nonhemagglutinin component.";
Int. J. Syst. Bacteriol. 46:1107-112(1996).

-! FUNCTION: Inhibits acetylcholine release. The botulinum toxin binds with high affinity to peripheral neuronal presynaptic membrane, is then internalized by receptor-mediated endocytosis. The C-terminus of the heavy chain (H) is responsible for the adherence of the toxin to the call surface while the N-terminus confidence translocation, the light chain (L) hydrolyzes the 197-Gln-1-Arg-198 bond in SNAP-25, thereby blocking neurotransmitter release. Inhibition of acetylcholine release.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an enail to license@isb-sib.ch).

Sequence 10, Application US/09848834A Patent No. US20020076416A1

GENERAL INFORMATION:
APPLICANT: Aphton Corporation
TITLE OF INVENTION: Chimeric Peptide Immunogens
FILE REFERENCE: 1102865-0047
CURRENT APPLICATION NUMBER: US/09/848,834A
CURRENT FILING DATE: 2001-05-04
PRIOR APPLICATION NUMBER: 60/202,328
PRIOR FILING DATE: 2000-05-05
NUMBER OF SEQ ID NOS: 20
SOFTWARE: PatentIn version 3.0

SEQ ID NO 10 LENGTH: 34

NAME/KEY: PEPTIDE
LOCATION: (22)..(25)
OTHER INFORMATION: Spacer peptide
NAME/KEY: PEPTIDE
LOCATION: (26)..(34)
OTHER INFORMATION: Amino acids 2-10 of the human Gn
NAME/KEY: MOD_RES
LOCATION: (34)..(34)
OTHER INFORMATION: Amidated glycine or glycinamide NAME/KEY: MOD_RES
LOCATION: (1)..(1)
OTHER INFORMATION: Amidated phenylalanine
NAME/KEY: PEPTIDE
LOCATION: (1)..(21)
OTHER INFORMATION: Amino acids 947-967 of the Tetanus Toxoid Precursor
OTHER INFORMATION: (Tentoxylysin) OTHER INFORMATION: Chimeric peptide consisting of amino acid sequence 947-967 OTHER INFORMATION: Tetanus toxoid precursor (Tentoxylysin) linked by a spacer OTHER INFORMATION: ino acid sequence 2-10 of the GnRH hormone FEATURE: ORGANISM: Artificial Sequence TYPE: PRT human GnRH hormone to of

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Title: Proteolysis of SNAP-25 by types E and A botulinal neurotoxins.
A; Reference number: A49708; MUID: 94124495; pMID: 8294407
A; Contents: annotation
C; Comment: Botulinum neurotoxins inhibit neurotransmitter release from cholinergic synap
C; Genetics:
A; Gene: atx; botA
C; Function:
A; Description: catalyzes hydrolysis of an Asn-Arg peptide bond in synaptosomal-associate
C; Superfamily: tetanus toxin
C; Keywords: disulfide bond; hydrolase; metalloproteinase; neurotoxin; transmembrane prot
F; 2444/Product: bontoxilysin A light chain #status experimental < LGHT>

non-proteolytic botulinum neurotoxin type B precursor - Clostridium botulinum C;Species: Clostridium botulinum C;Species: Clostridium botulinum C;Species: 12-Aug-1996 #sequence_revision 12-Aug-1996 #text_change 16-Jul-1999 C;Accession: 140631; S48103; S48104; S36015
C;Accession: 140631; S48103; S48104; S36015
Curr. Microbiol. 28, 101-110, 1994
A;Title: Nucleotide sequence of the gene coding for non-proteolytic Clostridium . A;Reference number: 140631; MUID:94122659; PMID:7764370
A;Accession: 140631
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A;Reference number: S27125; MUID:93063293; PMID:1331807
A;Contents: annotation
C;Comment: Botulinum neurotoxins inhibit neurotransmitter release fr
C;Genetics:
A;Gene: bont/b
C;Function: catalyzes hydrolysis of a Gln-Phe peptide bond in syn
C;Superfamily: tetanus toxin
C;Keywords: hydrolase; metalloproteinase; neurotoxin; transmembrane
C;Keywords: hydrolase; metalloproteinase; neurotoxin; transmembrane
C;Keywords: bontoxilysin B light chain #status experimental <LG
E;442-1291/Product: bontoxilysin B heavy chain #status experimental
E;330,234/Binding site: zinc (His) #status predicted
E;231/Active site: Glu #status predicted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.

COFACTOR: Binds 1 zinc ion per subunit (By similarity).

SUBUNIT: Disulfide-linked heterodimer of a light chain (L) and a heavy chain (H). The light chain has the pharmacological activity, while the N- and C-terminal of the heavy chain mediate channel formation and toxin binding, respectively.

SUBCELLULAR LOCATION: Secreted (By similarity).

MISCELLANEOUS: THERE ARE SEVEN ANTIGENICALLY DISTINCT FORMS OF BOTULINUM NEUROTOXIN: TYPES A, B, Cl, D, E, F, AND G.

SIMILARITY: BELONGS TO PEPTIDASE FAMILY M27.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ENDOPEPTIDASE.

CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the CATALYTIC ACTIVITY: Synaptobrevins, SNAP25 or synthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RELEASE.
